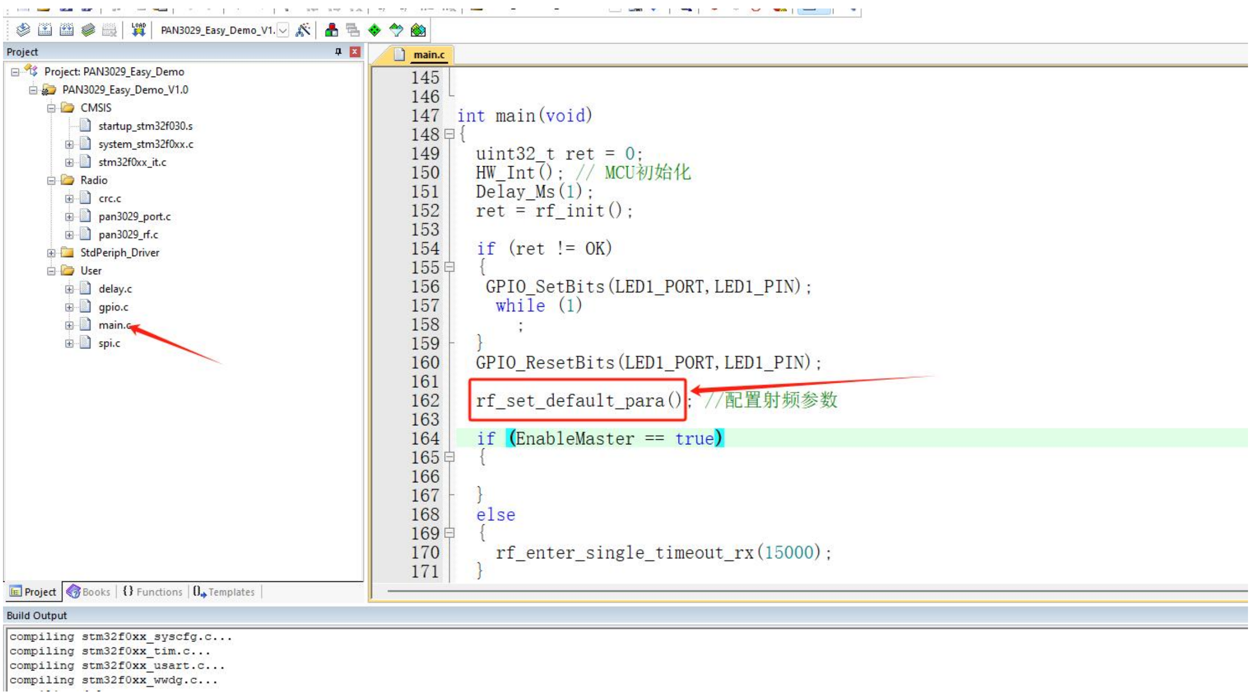
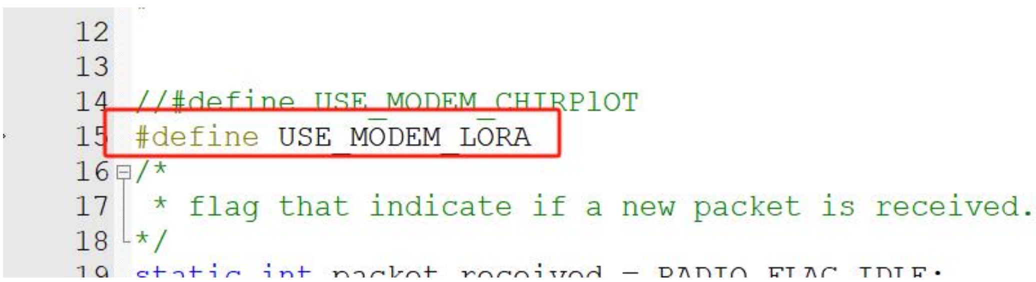
一、PAN3029 端修改参数

1. 打开 PAN3029 工程,如图下所示:

2. 找到 rf_set_default_para(); //配置射频参数



3. 基于第 2 步打开宏定义 USE_MODEM_LORA，如图下所示:



```c
  * @return result
  */
RF_Err_t rf_set_default_para(void)
{

#if defined( USE_MODEM_LORA )
   set_test_model_reg();//LoRa模式
   RF_ASSERT(rf_set_crc(CRC_OFF));//关闭CRC
#else
   RF_ASSERT(rf_set_crc(CRC_ON));
#endif

     RF_ASSERT(rf_set_freq(DEFAULT_FREQ));
     RF_ASSERT(rf_set_code_rate(DEFAULT_CR));
     RF_ASSERT(rf_set_bw(DEFAULT_BW));
     RF_ASSERT(rf_set_sf(DEFAULT_SF));
     RF_ASSERT(rf_set_tx_power(DEFAULT_PWR));
     return OK;
}
```

二、SX1268 端修改参数

1. 打开 SX1268 工程，如图下所示

SX1268ZTR4-GC_Easy_Demo_v2.3　　2024/7/3 10:38　　文件夹

2.打开 main.c 找到图下位置，需要把 CRC 关掉，即 CrcOn 位置中的 true 改成 false 即可，如图下所示:

```c
#if defined( USE_MODEM_LORA )

    Radio.SetTxConfig( MODEM_LORA, TX_OUTPUT_POWER, 0, LORA_BANDWIDTH,
                                   LORA_SPREADING_FACTOR, LORA_CODINGRATE,
                                   LORA_PREAMBLE_LENGTH, LORA_FIX_LENGTH_PAYLOAD_ON,
      修改前                        true, 0, 0, LORA_IQ_INVERSION_ON, 3000 );

    Radio.SetRxConfig( MODEM_LORA, LORA_BANDWIDTH, LORA_SPREADING_FACTOR,
                                   LORA_CODINGRATE, 0, LORA_PREAMBLE_LENGTH,
                                   LORA_SYMBOL_TIMEOUT, LORA_FIX_LENGTH_PAYLOAD_ON,
                                   0, true, 0, 0, LORA_IQ_INVERSION_ON, false );
```

```
#if defined( USE_MODEM_LORA )

    Radio.SetTxConfig( MODEM_LORA, TX_OUTPUT_POWER, 0, LORA_BANDWIDTH,
                                   LORA_SPREADING_FACTOR, LORA_CODINGRATE,
                                   LORA_PREAMBLE_LENGTH, LORA_FIX_LENGTH_PAYLOAD_ON,
                                   false, 0, 0, LORA_IQ_INVERSION_ON, 3000 );

    Radio.SetRxConfig( MODEM_LORA, LORA_BANDWIDTH, LORA_SPREADING_FACTOR,
                                   LORA_CODINGRATE, 0, LORA_PREAMBLE_LENGTH,
                                   LORA_SYMBOL_TIMEOUT, LORA_FIX_LENGTH_PAYLOAD_ON,
                                   0, false, 0, 0, LORA_IQ_INVERSION_ON, false );

#elif defined( USE_MODEM_FSK )
```

修改后

三、上面的参数修改好之后 互通的情况下两者之间还需要设置频率、SF(扩频因子)、BW(带宽)、CR 一致才可通讯，如图下所示:

SX1268 端：

在 main.c 中修改

```
//#define USE_MODEM_FSK

#define REGION_CN779

#if defined( REGION_AS923 )

#define RF_FREQUENCY                                923000000 // Hz

#elif defined( REGION_AU915 )

#define RF_FREQUENCY                                915000000 // Hz

#elif defined( REGION_CN779 )

#define RF_FREQUENCY                                433000000 // Hz

#elif defined( REGION_EU868 )

#define RF_FREQUENCY                                868000000 // Hz

#elif defined( REGION_KR920 )

#define RF_FREQUENCY                                920000000 // Hz

#elif defined( REGION_IN865 )

#define RF_FREQUENCY                                865000000 // Hz
```

FERQ=433.000000M

```
/*!
 * Radio events function pointer
 */

static RadioEvents_t RadioEvents;

#if defined( USE_MODEM_LORA )

#define LORA_BANDWIDTH                     BW=125K 0         // [0: 125 kHz,
                                                              //  1: 250 kHz,
                                                              //  2: 500 kHz,
                                                              //  3: Reserved]
#define LORA_SPREADING_FACTOR               SF=7   7         // [SF7..SF12]
#define LORA_CODINGRATE                     CR=4/8 4         // [1: 4/5,
                                                              //  2: 4/6,
                                                              //  3: 4/7,
                                                              //  4: 4/8]
#define LORA_PREAMBLE_LENGTH                       8         // Same for Tx and Rx
#define LORA_SYMBOL_TIMEOUT                        0         // Symbols
#define LORA_FIX_LENGTH_PAYLOAD_ON                 false
#define LORA_IQ_INVERSION_ON                       false

#elif defined( USE_MODEM_FSK )

#define FSK_FDEV                                   5e3      // Hz
#define FSK_DATARATE                               2.4e3     // bps
#define FSK_BANDWIDTH                              20e3     // Hz >> DSB in sx126x
#define FSK_AFC_BANDWIDTH                          100e3     // Hz
#define FSK_PREAMBLE_LENGTH                        5         // Same for Tx and Rx
#define FSK_FIX_LENGTH_PAYLOAD_ON                  false
```

PAN3029 端:

在 radio.h 中修改

pan3029_port.c | main.c | pan3029_rf.c | pan3029_rf.h | pan3029_port.h

```
#define ETSI_433
//#define ETSI_868

#if defined(JAP_915)
#define DEFAULT_PWR             17
#define DEFAULT_FREQ            (915000000)
#define DEFAULT_SF              SF_7
#define DEFAULT_BW              BW_125K
#define DEFAULT_CR              CODE_RATE_48

#elif defined(FCC_915)
#define DEFAULT_PWR             16
#define DEFAULT_FREQ            (915000000)
#define DEFAULT_SF              SF_7
#define DEFAULT_BW              BW_125K
#define DEFAULT_CR              CODE_RATE_48

#elif defined(ETSI_433)
#define DEFAULT_PWR             22
#define DEFAULT_FREQ            (433000000)
#define DEFAULT_SF              SF_7
#define DEFAULT_BW              BW_125K
#define DEFAULT_CR              CODE_RATE_48
